Auditory evoked potentials are electrophysiological responses with which to assess auditory function and neurological integrity. Auditory brainstem evoked response (ABR) testing is the most clinically useful in newborns, infants, and difficult-to-test children. It is accurate and reliable and can also detect unilateral loss.

Auditory Evoked Potential - an overview | ScienceDirect Topics

The observed auditory response waveform was consistent and detectable in all subjects. At first, this series of an auditory waveform was known as Jewett wave and latter as auditory evoked potential response or auditory evoked potential. Auditory brainstem responses (ABRs) comprise the early portion of (0-12 millisecond) of AEPs.

Auditory Evoked Potential Response and Hearing Loss: A Review

The book itself is a little bulky, covering some of the history of auditory evoked potentials (AEPs) or responses. It is probably a good book to have if you will not have a class on the topic. It is also a good reference to have as there are some normative data and explanations of proper elicitation of AEPs.
