Inorganic chemistry is the study of the synthesis, reactions, structures and properties of compounds of the elements. This subject is usually taught after students are introduced to organic chemistry, which concerns the synthesis and reactions of compounds of carbon (typically containing C-H bonds).

Unsolved problems in chemistry tend to be questions of the kind "Can we make X chemical compound?", "Can we analyse it?", "Can we purify it?" and are commonly solved rather quickly, but may just as well require considerable efforts to be solved. However, there are also some questions with deeper implications.

In my opinion the most important unsolved problem in chemistry is the polymerization of hydrocarbons, e.g. putting methane in a single reactor and getting naphtha and diesel out of it. The day that can be done the entire petrochemical industry will transform. A complete refinery substituted by single reactor.
